

#### LESS DOWNTIME

No need to pull equipment off the job for your welder. Simply bolt on the TrackClaws onsite with a ratchet and socket. Easily install and remove to cross roads.

#### SAVE MONEY

TrackClaws are a very cost effective way to add quick traction to your machinery in the field. Made from hardened steel to provide a durability. TrackClaws can be reused many times.

#### SAFETY

TrackClaws reduce slippage which can lead to overturned equipment or other worksite accidents. TrackClaws unique design improves traction considerably and reduces lateral sliding.

Montana TrackClaws were designed by second and third generation loggers who saw the need for such a product after struggling with the extended down times when continuously welding on grousers and cutting them off.

The TrackClaw works great on snow, ice, mud, and steep terrain. Unlike weld-on grousers that are added to almost every pad, TrackClaws only need to be installed on every 4th or 5th pad to get the maximum traction protection.
